

Tree Crown Instance Segmentation

Miles Berberich
milesberberich@stud-mail.uni-wuerzburg.de

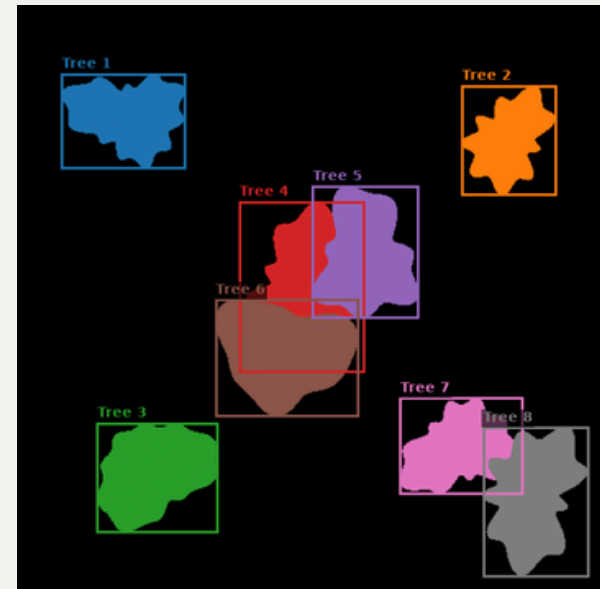

Why Tree Instance Segmentation?

semantic
segmentation

limited for tree-level analysis

instance
segmentation

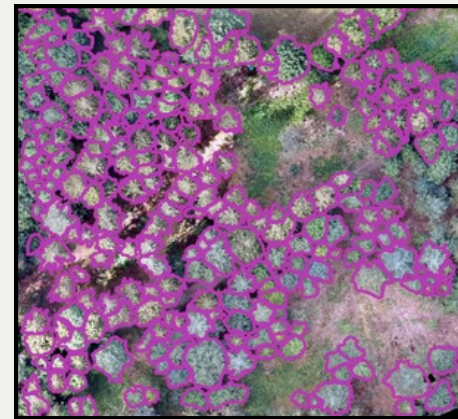

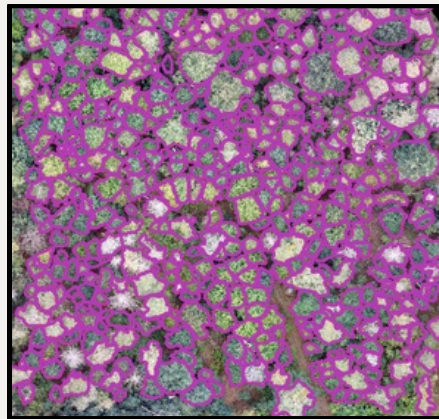

useful for counting, crown
metrics, tree level species
classification ...

Training Data

BamForests [1]:

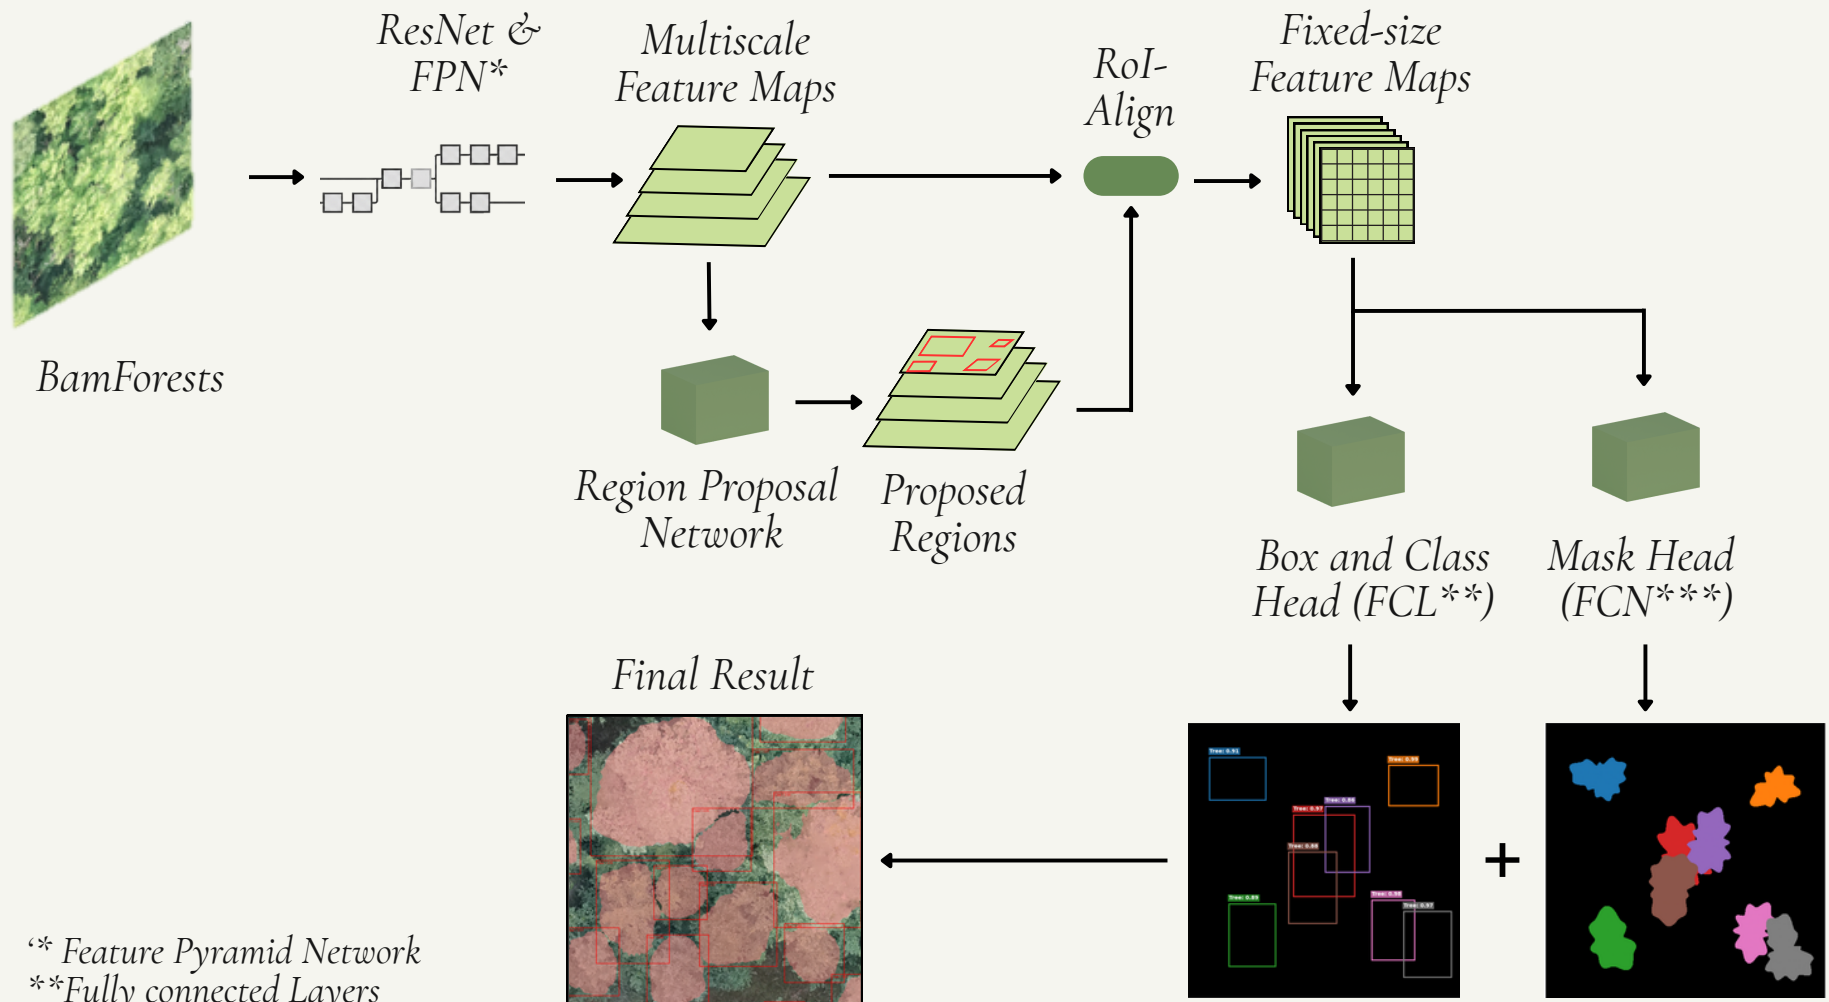

- ready-to-use labeled RGB-dataset (COCO-format) with 27.160 trees in total (split in train/test/validation)
- 4 AOIs near Bamberg (Upper Franconia)

Mask R-CNN

- extension of Fast R-CNN for instance segmentation [2]
- added a branch for object mask to Faster R-CNN
- often used for tree crown segmentation [3,4,5]

Model architecture

*** Feature Pyramid Network*

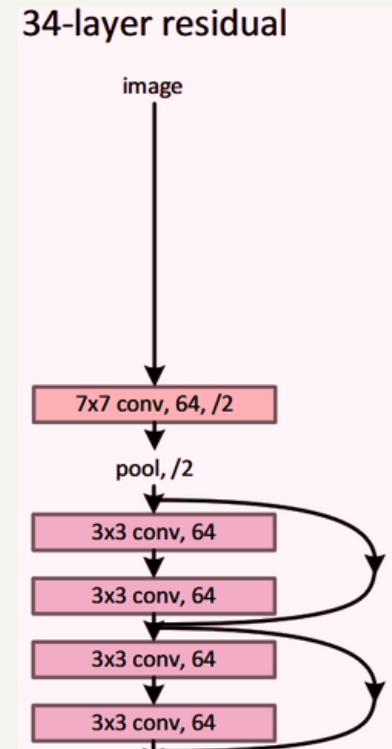

***Fully connected Layers*

**** Full convolutional Network*

Backbone

ResNet34 [6]

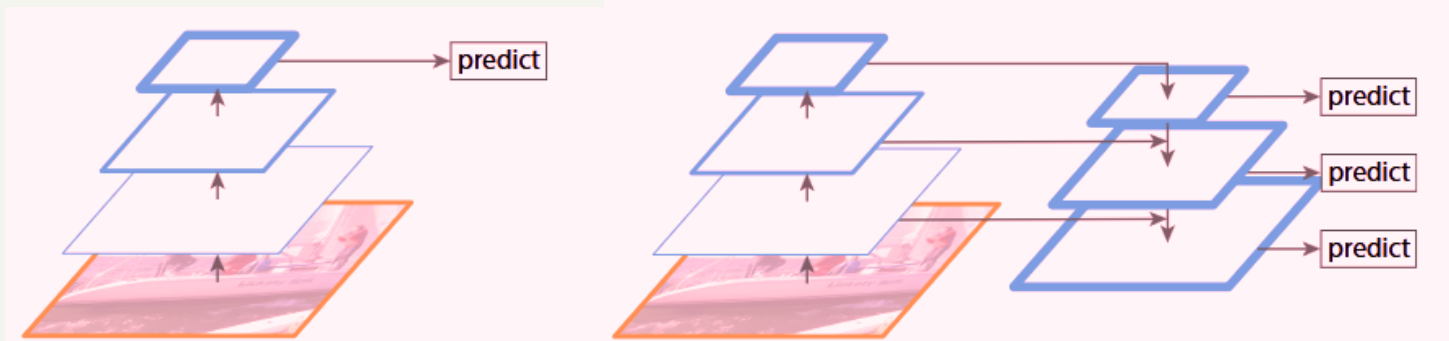

- Deep NN with skip connections
- pretrained weights were downloaded

Backbone

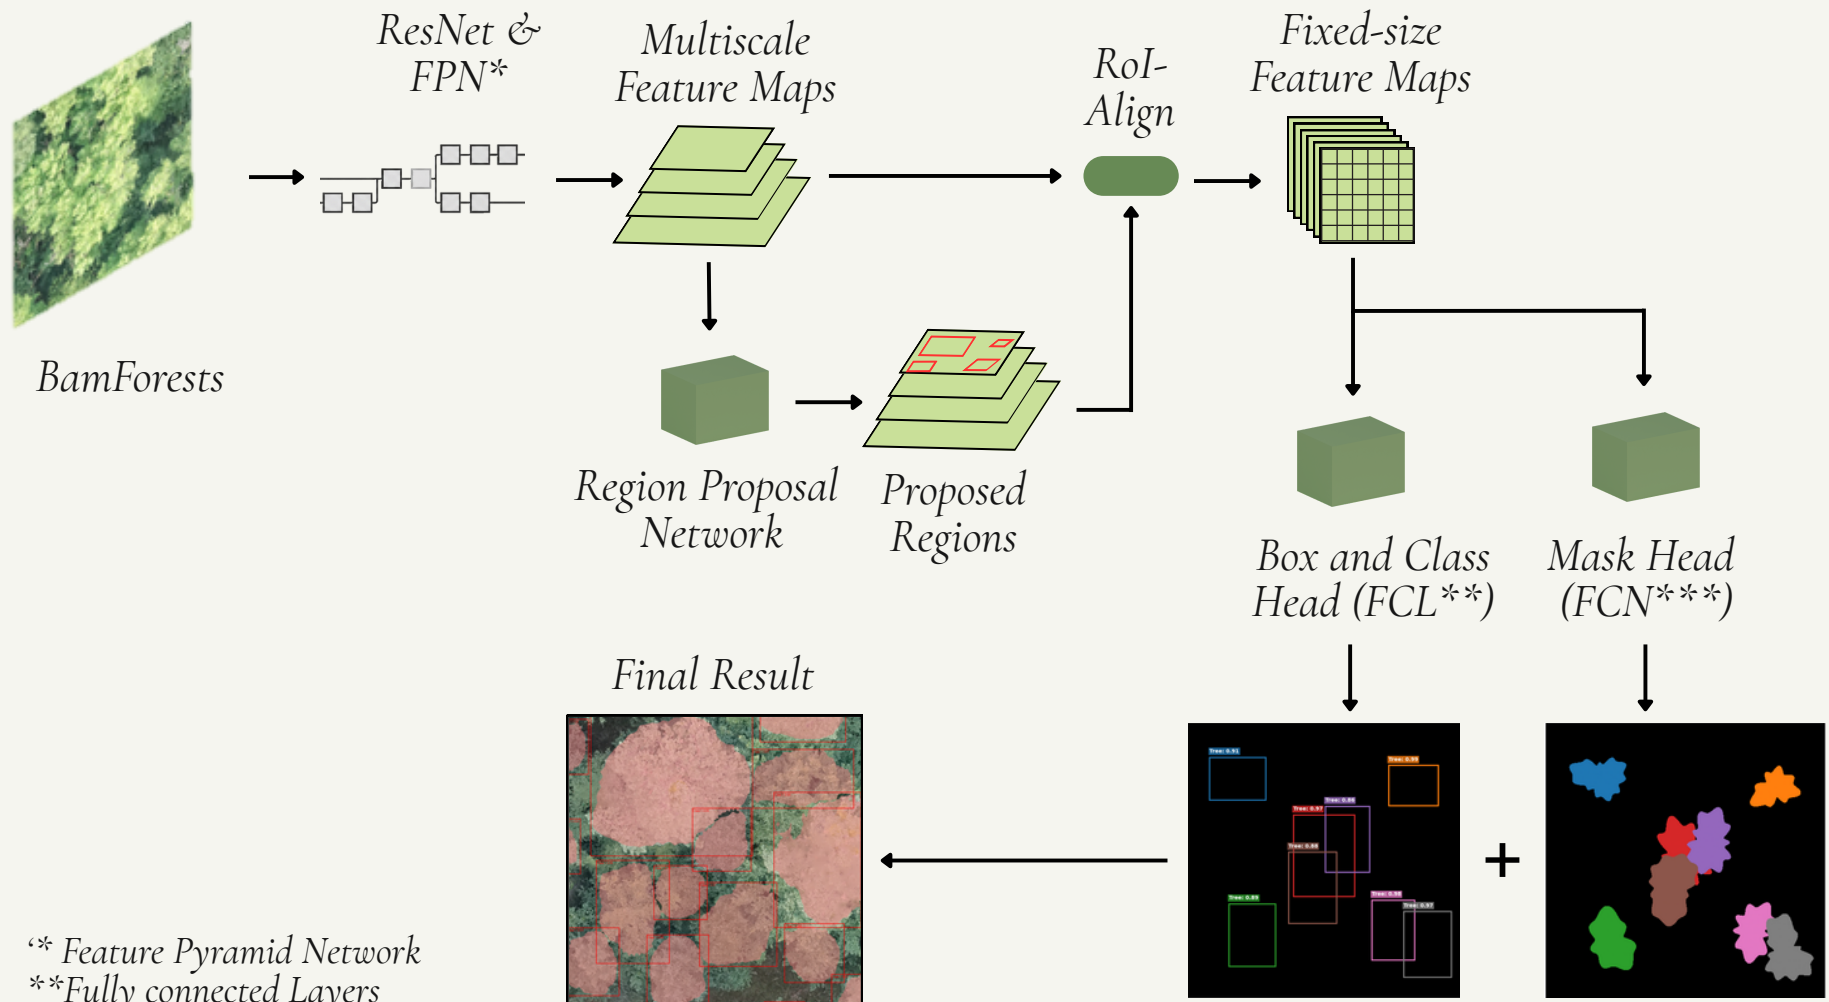

Feature Pyramid Network (FPN) [7]

- FPN create multiscale feature maps

Single feature map vs. FPN [7]

Model architecture

* Feature Pyramid Network
 ** Fully connected Layers
 *** Full convolutional Network

AdamW-Optimizer [8]

Adaptive Moment Estimation with Weight Decay

momentum

moving average of the gradients:

→ *controls direction and smooths noise to overcome local minima*

adaptive scaling

moving average of the squared gradients:

→ *adjusts the step size for each parameter*

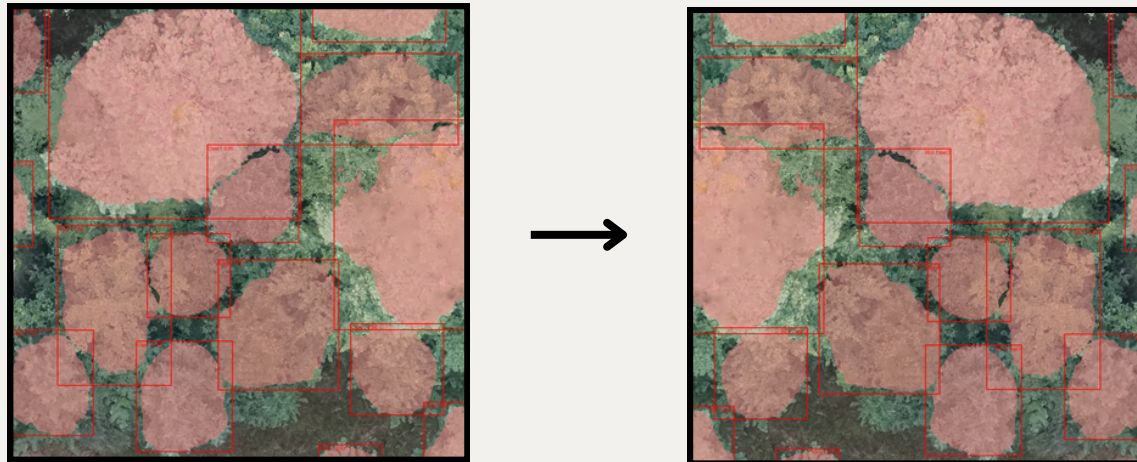

Decoupled weight decay

separates weight shrinkage directly from the gradient update step:

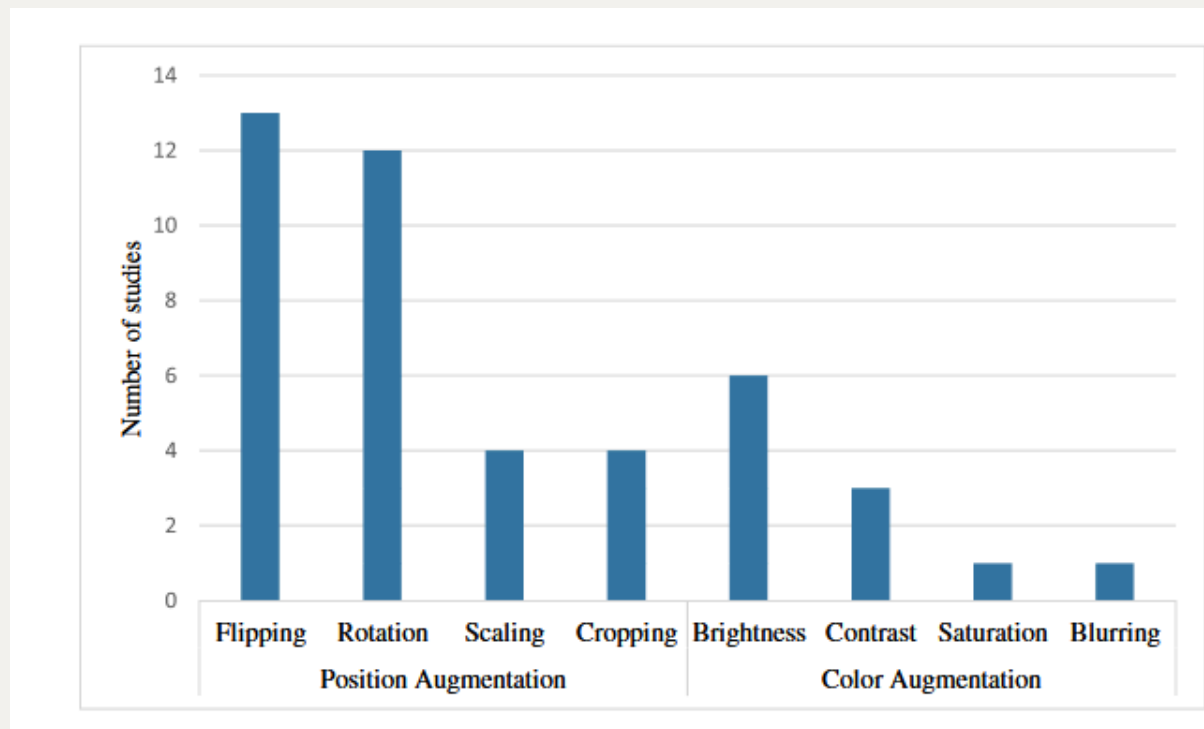

→ *L2 regularization*

Augmentation

- Rotation
- Reflection
- Scaling
- Brightness and Contrast
- (slight) Gaussian Blur

Augmentation

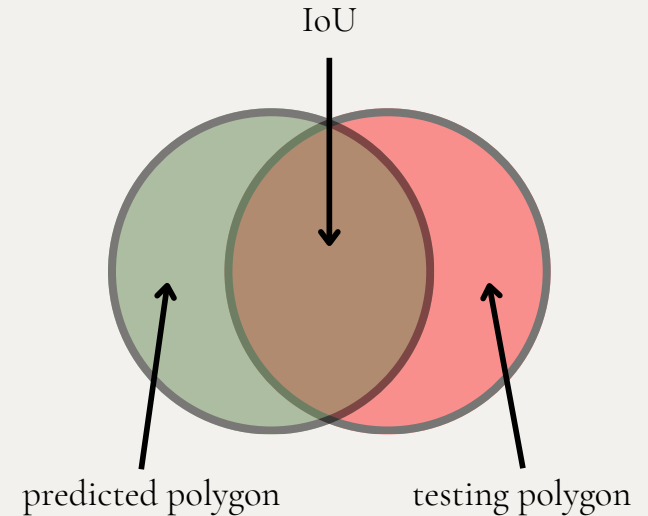

Most used augmentation techniques for crown segmentation according to [9]

Accuracy Assessment

- Intersection over Union (IoU)

$$\text{IoU}(A,B) = \frac{A \cap B}{A \cup B}$$

→ **IoU** > **0.5** is typically regarded as a **true positive** [4,5]

Therefore, classic parameters as **Precision**, **Recall** and **F1-Scores** can be calculated.

Accuracy Assessment

My model:

Accuracy: 0.525

F1 Score: 0.688

Precision: 0.637

Recall: 0.749

→ False Positives > False Negatives

Accuracy Assessment

My model:

Accuracy: 0.525

F1 Score: 0.688

Precision: 0.637

Recall: 0.749

≈

**Reference model
[4]:**

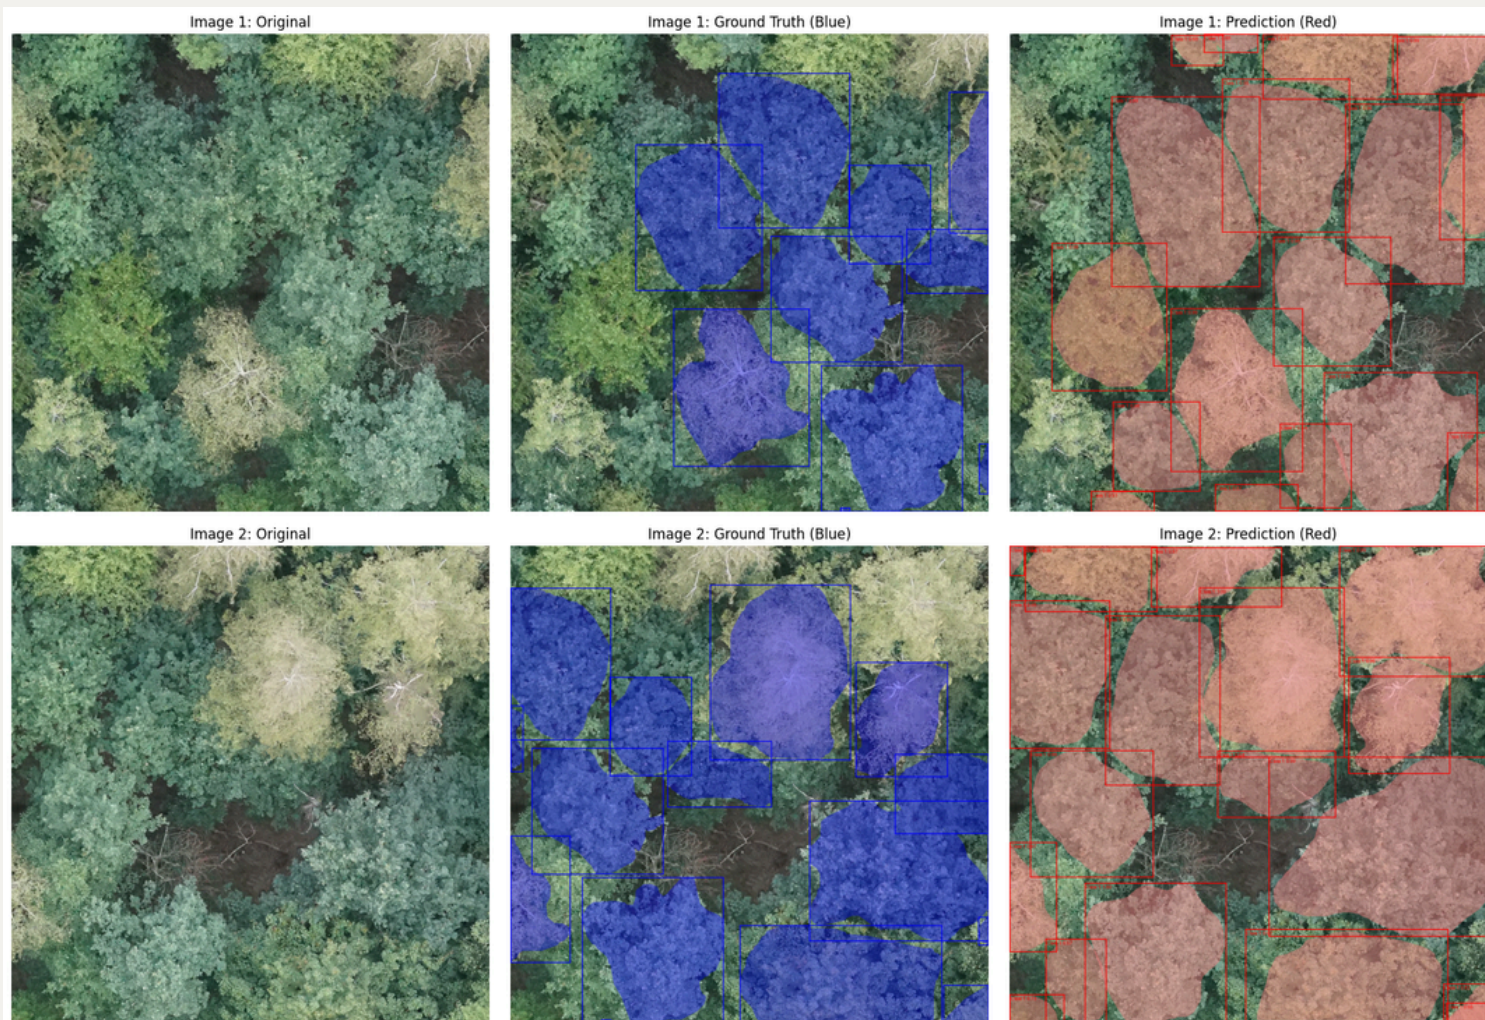

F1 Score: 0.634

Precision: 0.640

Recall: 0.629
